

OMNIGUARD Kiosk/Desktop

When data security is your primary concern, OmniGuard controls the flow of data into and out of your organization's network to protect against threats and leaks of sensitive data. OmniGuard Kiosk is a checkpoint for incoming data on USB drives and other media devices, providing the ability to detect and control digital data before it enters your network.

Use OmniGuard Kiosk to set filters to allow or block content based on file size, file type, document metadata, document classification and multiple antivirus scan results.

Capable of operating in online and offline mode. In online mode OmniGuard acts as a file server where scanned and validated content can be accessed, making a safe guard for meeting rooms.

Protect against attacks and potential threats by verifying files and documents

Advanced filtering capabilities provide options to allow or deny documents entering your network

Configurable multiple antivirus scan engines to detect and remove threats

Simplified dashboard for easy configuration and logging capabilities
